We mentioned in the previous learning activities that what drives research should be our desire to benefit humanity, not just for our own success. Why is it important to have these ethical mindsets in the long run, for humanity and ourselves? High standards of ethics of research are important, and hence must be understood and followed because they:

1) promote and adhere to the aims of research, such as knowledge, truth, and avoidance of error;
2) promote trust, accountability, fairness, and mutual respect, which are the values needed for collaboration and teamwork;
3) help guarantee that researchers are accountable to the public, especially when public funds are used;
4) help build and strengthen public support for research, for people and government are more likely to support a project with trusted quality and integrity; and
5) promote and adhere to the essential moral and social values and responsibilities, such as compliance with the law on human rights, animal welfare, public health and safety, among others.

We do research because we are curious and intelligent. But what is the point of intelligence and personal advancement if our work does not add to the good of mankind?

Exercises: Answer in no more than one (1) **complete sentence**.

1) State how ethical research contributes in addressing pandemic issues.
2) When we get inspiration from other people's works or ideas, what should we do?
   Hint: Look at what is done with the LASs!
3) State one problem that may arise in society if a researcher is dishonest.
