Components of a Research Manuscript

4) **Review of Related Literature** – describes past important published results to the research problem done by other researchers. This examines thoroughly the major theories and concepts related to the topic and includes current developments and findings from credible sources such as academic books and peer-reviewed journal articles.
5) **Methodology** – describes the materials, research design, methods, and other for analysis used to or to be used to complete the study.
6) **Results and Discussion** – presents the results of the analysis and discusses their implication, relation to the previous findings mentioned in the literature review, and potential for future research. The hypothesis should be answered and validated by the interpretation of the results.
7) **Summary and Conclusion** – presents concisely the essential results of the research work. It also provides recommendations and potential of the research for future study.
8) **Bibliography** – lists alphabetically all the academic sources of information that are cited in the research manuscript.

Exercises: Answer in no more than three (3) **complete sentences**.

Why is the "review of related literature" section important in a research paper?
